Control Monkey

KoMo AI:
The Next Evolution of Infrastructure Delivery

ControlMonkey, the only end-to-end infrastructure Governance and Resilience platform, now brings you KoMo AI - your GenAI IaC assistant helping you build environments faster, eliminate skills gaps, and accelerate innovation.

3x	**50%**	**30%**
Faster Deployment	**Less** Ticketing between teams	**Increase** in DevOps productivity

Key Challenges

Frictions between teams
Misaligned workflows slow delivery - DevOps becomes a bottleneck while other teams wait for reviews, fixes, and approvals.

Skills Gap
Gaps in Infra & IaC expertise across teams create bottlenecks, inconsistent delivery, and higher operational risk - slowing the entire organization down.

Governance at Scale
Policies, guardrails, and best practices are difficult to enforce consistently across multi-repo, multi-team and multi-account environments.
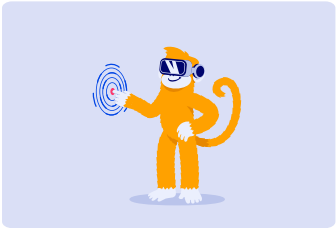

Can't Keep Up With the AI Wave
Manual workflows can't match the speed of AI-driven development, slowing progress and competitiveness.

KoMo AI: How It Works?

KoMo Learns Your Environment
KoMo understands your IaC codebase, cloud resources, and organizational policies.

You ask for Infrastructure
Simply request what you need through chat-KoMo interprets it instantly and handles the heavy lifting.

KoMo Generates Code & PR
KoMo creates compliant, resilient IaC tailored to your organization and delivers it as ready-to-merge pull requests.

KoMo Makes Your Team Better

Streamlined Infrastructure Delivery
Accelerate IaC creation and deployment with automated, compliant workflows that help you move faster without breaking things.

Faster Innovation & Collaboration
Scale quickly, adopt new services with ease, and enable teams to collaborate effectively under shared policies and guardrails.

Reduced Team Friction
Eliminate back-and-forth tickets, reviews, and dependencies by giving every engineer the context and confidence to request or spin up infrastructure.

Higher Team Productivity
Let DevOps focus on what matters most while other teams gain the autonomy to deliver infrastructure safely and efficiently.

> "Democratizing self-service is the future of how organizations scale on the cloud. It's the only way to meet business speed and innovate faster, while maintaining a compliant production environment."
>
