

Okta Disaster Recovery

Disaster Recovery for Identity Configuration

Make Your Okta Environment Recoverable

ControlMonkey makes Okta configuration recoverable with continuous backup, versioning, and restore — giving teams a reliable path to recover identity settings when needed.

Okta governs access to critical apps and services, but its configuration is often left exposed. If users, groups, roles, or policies are changed or deleted, access breaks and teams are forced into manual recovery.

100%

Resilience

For Okta Configuration

Why Okta Needs Disaster Recovery

Accidental Misconfiguration

Restore users, groups, roles or policies after human error.

Unauthorized or Risky Changes

Investigate what changed and recover a known-good identity.

Audit and Compliance Readiness

Track identity configuration history and improve governance.

Faster Identity Recovery

Reduce downtime when access, assignments, or policies break.

Unauthorized AI Agent

Recover Okta access settings after an AI agent makes risky or unapproved changes.

ControlMonkey for Okta DR

ControlMonkey gives teams a reliable recovery path for Okta configuration by discovering identity resources, capturing daily snapshots, and storing each state as a versioned recovery point.

With ControlMonkey, teams can protect Okta resources including:

- Users
- Groups
- Roles
- Permissions
- Applications
- Assignments
- Access policies
- Identity configuration settings

Key Capabilities

Okta Inventory

Get a complete view of Okta users, groups, roles, applications, assignments, policies, and identity resources.

Governance and Auditability

Track identity configuration changes over time and reduce the risk of unauthorized or undocumented changes.

Time Machine Recovery

Review past Okta states and restore known-good versions after mistakes, risky changes, or malicious activity.

Coverage Visibility

See which Okta resources are managed by Terraform and which remain unmanaged or manually changed.

Daily Okta Configuration Backups

Capture daily snapshots of Okta configuration to create repeatable recovery points.

Request Your **Free** Okta DR Assessment

See how recoverable your Okta configuration really is.

ControlMonkey helps you uncover unmanaged identity resources, backup gaps, and recovery risks — with a practical DR-as-Code plan for Okta.
